

**SUMMARY**

Senior Software Engineer, frontend-focused, with 8+ years building scalable, performance-critical web applications in React and TypeScript. I work at the seam between design and engineering, and the work I'm proudest of is performance work, making interfaces stay responsive when the data underneath them won't sit still. I'd rather own a feature end to end, including the part where the requirements are still an argument. Two things occupy my own time: building an interactive 3D portfolio in Three.js and WebGL, and learning AI development from a frontend point of view.

**CORE SKILLS**

- **Front-End:** React (Next.js), TypeScript, JavaScript (ES6+), Vue, Web Components, WebGL
- **Design & Prototyping:** Figma, Sketch
- **Mobile Development:** Flutter, React Native
- **Languages & Backend:** Node.js, Python, Go, GraphQL, Rust, REST APIs
- **DevOps & Tools:** Git, Docker, GitHub Actions CI/CD, GitHub Copilot, Claude Code
- **Testing & Quality:** Vitest, Jest, Playwright, Cypress, Storybook
- **Database Management:** MS SQL Server, MongoDB, Firebase
- **Cloud Services:** Azure, AWS

**CAREER SUMMARY**

- **Webstep AS, Oslo – Senior Consultant** *May 2022 – Present*
- **Time and Date AS, Stavanger – Front-End Developer** *Aug 2020 – May 2022*
- **Origin AS, Stavanger – Web Developer, Full-stack** *Jan 2019 – Aug 2020*
- **Ostowone Sabz Co, Tehran – Software Engineer** *Mar 2017 – Jun 2018*

**HIGHLIGHTED PROJECTS****Design System (Lyse AS):**

- Acted as Frontend co-architect, taking ownership of the technical direction to bridge the gap between design and engineering for the [Form Design System](#).
- Shaped my own work and the team's technical standards by independently authoring Architectural Decision Records (ADRs) and driving the component lifecycle from initial user insight to a stable, scalable solution.
- Established WCAG 2.1 accessibility governance across the component lifecycle, collaborating directly with designers in Figma within an autonomous, cross-functional team of 9.

**Fusion Pit Stop (Equinor ASA):**

- Partnered directly with product owners and stakeholders to discover and define what to build, translating a fragmented, ambiguous workflow into a streamlined digital decision-management tool.

- Operated in a highly autonomous, high-trust environment, balancing user needs with the technical complexities of integrating multiple enterprise data sources into a unified React/TypeScript and C# architecture.
- Built and maintained five applications on top of Equinor's Azure-based PaaS, ensuring seamless continuous integration and deployment.

### **Configurable Online Calendar (Time and Date AS):**

- Acted as the primary frontend engineer within an agile, cross-functional team to deliver features end-to-end for a high-traffic calendar platform serving 400k–500k daily users.
- Built highly interactive, maintainable UI components using Vue 2 and Sass, seamlessly integrating them with Rust REST APIs and complex localization backends.
- Spearheaded client-side performance optimizations, successfully reducing average page load times by 20% and improving the experience for a massive global user base.

### **AV Analytical Platform (Sportradar AS):**

- Contributed to a [sports analytics and reporting platform](#) used by betting operators, taking ownership of frontend performance and maintainability.
- Modernized the React codebase and utilized profiling tools (React Profiler, Chrome DevTools) to resolve performance bottlenecks in real-time analytical features.
- Implemented virtualization and strict memoization strategies, reducing average component re-render times by roughly 40% and minimizing main-thread blocking to ensure a smooth, responsive UI during high-frequency live data updates.

## **SELECTED 3D / GRAPHICS WORK**

### **Interactive 3D Portfolio Website ([Behfar.dev](#))**

- Designing and developing a personal web experience utilizing React, Three.js, and WebGL.
- Implementing custom 3D geometries, custom GLSL shaders and hand-built scroll/mouse-driven camera controls, optimizing for a smooth 60fps frame rate in the browser.

## **EDUCATION**

2018/19 – 2020/21

• **MSc. in Computer Science, Reliable and Secure Systems**  
Electrical Engineering and Computer Science Department  
University of Stavanger, Stavanger, Norway  
*Thesis: Implementation of TOTEM-defined SDK*

2008/9 – 2012/13

• **BSc. in Computer Engineering, Software Engineering**  
Computer Engineering Department, Faculty of Engineering  
University of Guilan, Iran.

## **LANGUAGES**

- **English:** Fluent
- **Norsk Bokmål:** B1 (actively improving)
- **Persian:** First language
